

VERONICA CANIDO

SENIOR FRONTEND ENGINEER | REACT & TYPESCRIPT

Florida · veronicacanido@gmail.com

[LinkedIn](#) · [GitHub](#) · [Website](#)

SUMMARY

Frontend-focused Software Engineer with 6+ years building and shipping production React and TypeScript applications across cybersecurity, healthcare, and fintech. Owned complex, cross-functional product work from technical design through launch and iteration, including reusable component systems, data-heavy workflows, API integrations, testing, and accessibility. Former team lead who remained hands-on in development, code review, and mentoring.

TECHNICAL SKILLS

Frontend: JavaScript (ES6+), TypeScript, HTML, CSS, React, Redux, TanStack Query (React Query), React Router, React Hook Form, Material UI, AG Grid, amCharts, Figma

Backend & Data: Node.js, Express, Meteor, MongoDB, SQL, Supabase/PostgreSQL, REST APIs, Spring Boot (Java/Groovy)

Testing & Quality: Jest, React Testing Library, Vitest, Snyk, WCAG/ADA accessibility

Practices & Tools: Git, CI/CD (GitLab CI/CD, Jenkins, GitHub Actions), Postman, Swagger/OpenAPI, Agile/Scrum, code review, Jira, AI-assisted development (Claude Code, Cursor, ChatGPT/Codex)

PROFESSIONAL EXPERIENCE

Fortress Information Security - Software Engineer / Team Lead

May 2022 - Feb 2026

- Led a cross-functional team of frontend and backend engineers and QA through planning and releases while remaining a hands-on developer.
- Owned the catalog interface for an AI Monitoring product from evolving requirements and technical design through MVP release in React, Node.js, and MongoDB, giving customers a way to manage and visualize thousands of SBOM components.
- Built UI features for the first product demo that helped secure a U.S. Department of Defense (DoD) contract, contributing from spec planning and architecture through multiple sprints of high-stakes delivery.
- Optimized data-heavy views, including amCharts map visualizations and data tables aggregating hundreds of thousands of records, by restructuring MongoDB queries to eliminate unnecessary lookups and cut load times.
- Created the project's shared frontend foundation and a reusable MUI Data Grid compatible with legacy and new column configurations, supporting a company-wide move away from SlickGrid and establishing patterns adopted across teams.
- Used Claude with project-context documentation to navigate an unfamiliar Python codebase, reproduce a release-blocking import failure across mismatched backports, restore omitted payload fields, and coordinate cross-team regression testing.
- Partnered with Product and Design to shape incomplete Figma flows; documented use cases, test plans, edge cases, and release guidance so technical and nontechnical teams could review changes clearly.

JPMorgan Chase - Software Engineer (Junior to Associate)

Jun 2019 - May 2022

- Built a client-facing healthcare application using React, Redux, TypeScript, and Spring Boot, enabling clients to process payments, onboard users, analyze data, and monitor internal processes; collaborated with Product and UX from Figma designs through monthly production releases.
- Delivered a full-stack operations portal from the ground up using React, Material UI, and Spring Boot, later adopted in production by internal teams.
- Worked with JPMorgan Chase's shared Material UI-based component library for internal web applications; applied standardized components, submitted fixes through fork-based pull requests, patched versioned releases, and raised upstream issues with the library team when product needs required shared support.
- Implemented automated test suites with Jest and React Testing Library, maintaining at least 70% test coverage; supported Jenkins CI checks, remediated Snyk findings, and delivered 90%+ WCAG compliance.
- Mentored incoming SEP engineers and interns through their first roles at the firm.

ENTREPRENEURIAL EXPERIENCE

Banh Miow Cafe - Co-Owner & Operator

Feb 2026 - Aug 2026

- Co-founded and operated a cafe, owning the customer experience and day-to-day decisions across staffing, inventory, vendors, and budgeting.
- Used AI-assisted tools to rapidly build a full-stack Square-integrated kiosk, recipe, inventory, and prep-forecasting app; its recipe workflow cut initial training for an 80+ item menu from weeks to several hours. Vite, Vercel Functions, Supabase/PostgreSQL, Square API.

PROJECTS

- Neko Dancer 2.0 - Browser multiplayer rhythm game with chart authoring, PixiJS gameplay, WebSocket rooms, chat, and synchronized YouTube playback. React, TypeScript, PixiJS, Node.js, WebSockets, YouTube IFrame API. [Play-room design case study](#).
- Hop//Beat - Deployed, playable browser-based spatial rhythm game using webcam pose tracking to turn full-body movement into gameplay. React, TypeScript, Vite, MediaPipe Pose Landmarker, PixiJS. [Play the game](#).

EDUCATION & ACTIVITIES

B.S., I.T. & Software Development, Florida International University (2019) | A.A., Computer Science, Miami Dade College (2017) | SEP Special Cases Award, JPMorgan Chase (2021; top 5% performer) | Women in Cyber Board Member | Force For Good Volunteer
